

## **Medikoi Paste**

The already much talked about MediKoi range of high quality fish foods is expanding. Using NT Labs expertise in innovation and technology they have developed the premium of all Koi foods in MediKoi Paste. A revolutionary new product never before been available in the UK aquatics market and has created a new level of excellence in the Koi food sector. The consumer today has become more aware of their pets welfare and providing nutritionally balanced high quality foods and treats is part of this knowledge which inspires consumers to feed new and unique nutritious treats.

The formulation of this ready prepared “dough-like” paste provides the highest quality nutrition and palatability available to fish. The ingredients in Medikoi Paste are of the finest quality and have been sourced worldwide. In the production of Medikoi Paste ingredients are not exposed to high temperatures which are used in the manufacture of an extruded pelleted food. This ensures the diet has an increased bio-availability so delivers all the essential nutritional elements required to maintain health. The cold blending results in an increased nutrient up-take by the fish and increased growth. Due to the increased level of bio-availability, less waste is produced which helps maintain a healthier and cleaner aquatic environment. A mid protein content enables Medikoi Paste to be fed for a much longer period throughout the season and still promote maximum growth. Key ingredients include: Prebiotics, LHT Fishmeal, spirulina, chitosan, orange and herbs to provide anti-viral and anti-bacterial properties to name but a few.

Medikoi Paste is available in 400g silver foil re-sealable bags. RRP £19.99. For your nearest stockist and a FREE NT Labs brochure contact NT Labs on 01622 817 692 or visit [www.ntlabs.co.uk](http://www.ntlabs.co.uk)
