## Medikoi

### Medikoi Silkworm Pupae

Medikoi Silkworm Pupae is a high protein growth booster. Feeding protein is the way to make your fish grow very rapidly. Medikoi Silkworm Pupae contain a minimum of 56% protein and are one of the richest natural sources of protein.

Making fish grow quickly should only be done in warm weather when the water temperature is around 15 degrees centigrade. Medikoi Silkworm Pupae are also rich in oils known as Essential Fatty Acids (EFA's) These oils are vital to keep fish in tip-top condition. They play a special role in a very wide variety of metabolic processes including the immune system and even in improving mood though that is a bit difficult to demonstrate in fish!

Making fish grow rapidly is fine for producing large fish quickly but it is important to give the fish a rest from rapid growth from time to time to help avoid the possibility of complications such as cancers etc developing.

When resting fish from a rapid growth programme, Medikoi Wheatgerm with Garlic is the alternative of choices.

Analysis: Crude Protein 56%, Crude Fat 26%, Crude Fibre 3.5%, Moisture 7.5%, Ash 3.5%

Store tightly closed in a cool dry place out of direct sunlight. Once opened use within 8 weeks of opening. Do not overfeed!
