

Heat Emitting Tables

A Revolutionary New Concept In Outdoor Dining

Commercial and Domestic
Indoor and Outdoor applications
Hotels . Restaurants . Bars
Golf Clubs . Ski Resorts

CozyTable is the result of two years research and development, resulting in a brand new breed of patio heater.

With an eco-friendly 1kW electric heating system CozyTables are energy efficient and economical, costing up to ten times less than traditional gas patio heaters to run.

Cool air is taken in through the lower vents, warmed in the pedestal, and expelled gently via the upper outlets underneath the table top. This creates a warm and cozy atmosphere with no intense light, or hot-to-touch parts.

CozyTable applications are endless. With both domestic and commercial uses for warming indoor and outdoor cold spots.

Nature's finest materials, manufactured and assembled by Craftsmen in the UK.
