

The ultra-light Revolution: The totally light and compact rope set for when you are on the move

Along with the handy peg supplied with them, the cables weigh no more than 90 grams, but they can support a weight of 150 kilos! Thanks to the high-tech material of which they are made – a super high molecular weight polyethylene – they are also exceptionally robust, weatherproof and compact.

Simple and continuously adjustable. Comes with a tree-friendly Tree Strap, drip lines and Soft Carabiner, making it easy to attach your hammock loop – on being passed through it positions itself transversely to the hammock, and holds firm no matter what amount of strain is put upon it.
